Lockin

Made for life

Built for your project

Designed to match your project specification requirements

Custom sizing and configuration as required

Material, finish, lock system and component selections
aligned to schedule

Delivered through a single point of contact from approval to
installation

Installation dates aligned with project delivery

Typical production timeframe: 4-6 weeks
(confirmed at order)

Manufactured in Melbourne

Lockin

Made for life

Workplace
End-of-trip
Education
Gym and change-room
Elite sport

Lockin specialises exclusively in commercial locker environments, partnering with architects, builders and project teams to design, manufacture and install commercial locker systems across workplace, education, end-of-trip and public-use environments.

Lockin

Built on experience

Proven delivery at scale

Since 2013

Specialising in lockers since 2013.

Focused, experienced and consistent.

731 locker projects

We've designed, manufactured and installed over 731 locker projects.

As at June 2026

3,952 lockers

Largest single project.

3,952 custom shelving lockers
(Transport for NSW)

10-year warranty

10-year warranty on all Lockin lockers.

Locks and accessories are covered by their respective manufacturers.

Full warranty details available in our Terms & Conditions.

Made responsibly

Made in Melbourne. Sustainability built in.

Conserving resources

Much of our manufacturing is powered by rooftop solar, helping reduce carbon emissions, and rainwater is captured and reused to help conserve water.

Manufacturing waste materials are separated for recycling to help conserve natural resources and support material reuse.

Built to last

Our melamine lockers are constructed using 18mm low-formaldehyde E0 panels.

Our steel lockers are manufactured using durable powder-coated steel free of solvents, volatile organic compounds (VOCs), and heavy metals.

Green and gold

Lockin lockers are manufactured in Australia using materials selected to support Green Star project requirements where applicable.

Required compliance documentation can be provided to support Green Star and project certification requirements.

Designed to adapt

Our lockers are designed to move. They can be entirely dismantled, moved and reassembled.

Our laminate and steel locker components can be separated and recycled at end-of-life.

Designed around your project

Lockin lockers are manufactured to order and configured around the needs of each project — from dimensions and materials through to layouts, locking systems and accessories.

Flexible dimensions & layouts

Locker widths, heights, depths and internal configurations can all be adjusted to suit project requirements, available space and user needs.

Material & finish flexibility

Available in laminate, steel or hybrid constructions, with commercial finishes including timber-look laminates, powdercoat colours, perforations and custom graphics.

Integrated lock & accessory systems

Locker systems can be configured with mechanical, digital, RFID or hardwired locking systems, alongside accessories such as seating, charging, mail slots, ironing stations and drying facilities.

Built for project-specific applications

From workplace and education environments through to elite sports facilities and custom operational requirements, Lockin systems can be adapted to suit unique project briefs.

Materials & finishes to fit your project

Lockin lockers are available in laminate, steel and hybrid constructions, with finishes and detailing selected around the operational, aesthetic and durability requirements of each project.

Laminate finishes

Laminate lockers offer a wide range of commercial colours, woodgrains and textured finishes that integrate easily with interior palettes and surrounding joinery systems.

Steel & powdercoat

Welded steel lockers provide durability, moisture resistance and security, with modern powdercoat finishes and perforation patterns increasingly used as architectural design elements.

Hybrid options

Hybrid systems combine welded steel locker bodies for strength and durability with laminate doors and finishes for a warmer, furniture-like appearance.

Custom detailing

Lockers can be configured with perforations, graphics, numbering, signage and ventilation detailing to support branding, wayfinding and architectural integration.

Here's how your project is delivered

Clear process. Single point of contact. No surprises.

Single point of contact

A dedicated project lead manages your job from quote approval through to completion, aligning with your site program and coordinating with your project team, architect and trades.

Defined before manufacture

Everything is manufactured from signed-off drawings, with sizes, finishes and hardware resolved before production.

Local manufacturing

Manufactured in-house in Melbourne for consistent quality, shorter lead times with no offshore delays.

Specialist installation

Installed by experienced teams to ensure accurate assembly, compliant fixing and minimal disruption on site.

Lockin

Made for life

Sustainable

Responsible manufacturing

Manufactured locally in a controlled production environment to support responsible material use and waste reduction.

Lockers can be dismantled, relocated and reused to extend lifecycle and reduce waste.

Production is supported by solar power and water collection systems at our Melbourne facility.

Lockin lockers are commonly specified on Green Star projects, supporting end-of-trip facility and indoor environmental quality requirements.

Q:

A: Yes

Made for life

Lockin's greatest competitive strengths is its flexibility.

Unlike many locker suppliers, we're not constrained to a narrow catalogue of fixed products or rigid specifications.

Our ability to answer 'yes', reduces friction for specifiers and shifts the conversation to our default position - how we can help their project succeed. Our answer is 'yes' to;

- Flexible configurations
- Steel AND laminate
- Multiple lock suppliers
- Integrated accessories
- Project advice
- Planning resources
- One project manager
- One manufacturer
