

Finishes: Patterns

Gather

Lockin

Overview

Gather is an abstract perforation design inspired by the way people naturally gather, pause, move and interact throughout shared spaces.

Individual moments form clusters that shift across the pattern, creating a visual expression of the social rhythms that shape shared environments.

Design expression

Rather than depicting identifiable people or movement, Gather uses abstraction to suggest the changing rhythms of shared environments.

Clusters and individual forms create a pattern that can be read in different ways, allowing the design to remain suggestive rather than literal.

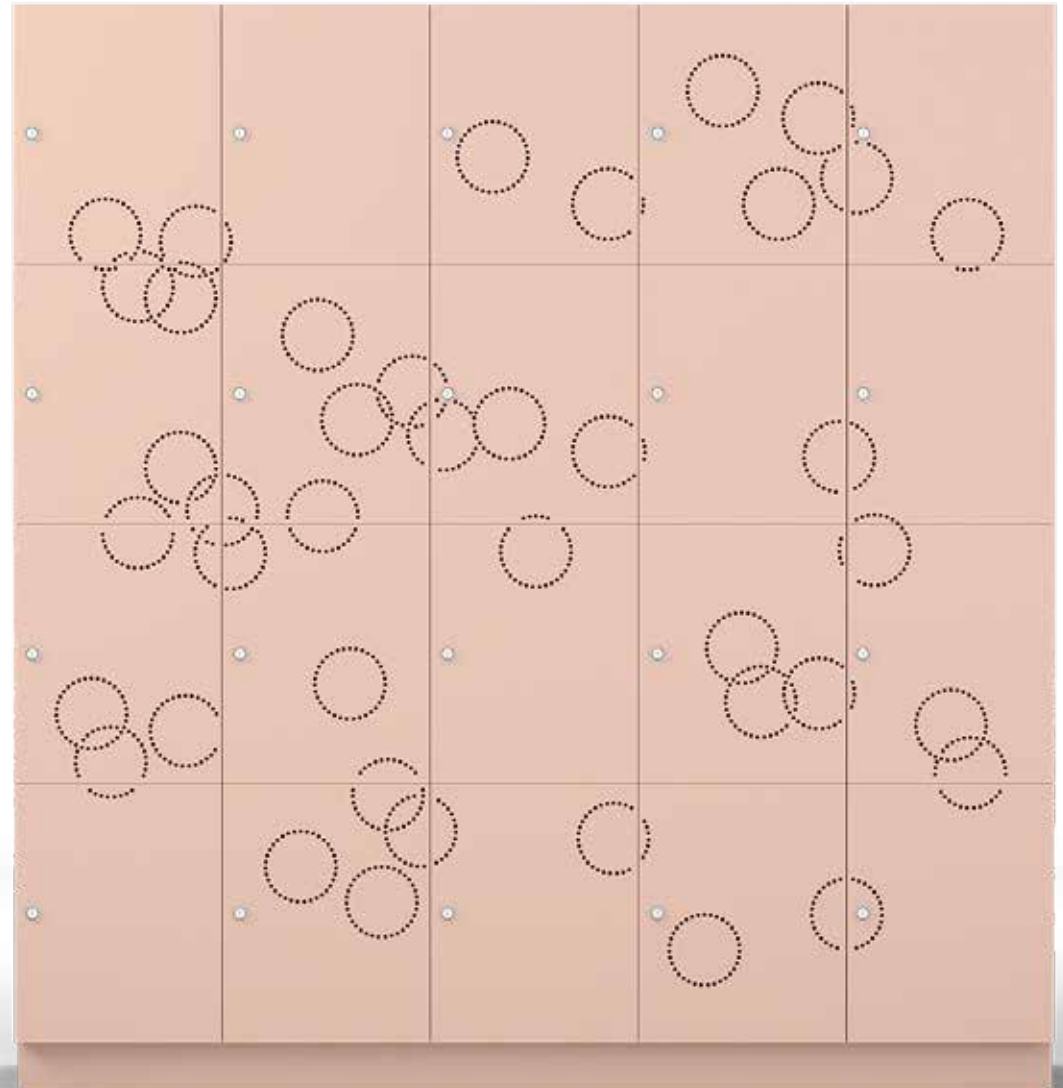

Project application

Gather is designed as a seamless repeating pattern that can extend across different locker configurations and installation widths while maintaining its visual rhythm.

Its abstract character makes it particularly suited to shared environments where interaction, collaboration and everyday occupation form part of the experience of the space.

Lockin

Perforation considerations

Pattern structure

The pattern can be scaled across different sized locker bank installations while maintaining its visual rhythm and relationship between individual forms and clusters.

Pattern composition

Individual forms, overlaps and clusters are distributed throughout the repeat to create areas of activity and quieter space rather than a uniform geometric field.

Finish & contrast

Gather was conceived with warmer powdercoat tones in mind, reinforcing the softer, more human character of the pattern. Other finishes can be considered as part of the overall project palette.

For shared spaces

Gather complements workplace, education and community environments where collaboration, interaction and shared occupation form part of everyday experience.

To specify a Gather pattern for your project, provide:

Indicative locker layouts
Preferred locker configuration
Preferred powdercoat finish
